LIVELIHOODS KEY PROGRAM INDICATORS LIST

1. OBJECTIVE AND BACKGROUND

There has been an outstanding effort to develop key indicators and promote their use by different humanitarian actors and in different fora or coordination spaces, like The Sphere Project, thematic clusters, etc. A good example could be the Key Results Indicators (KRI) for the sectors of food, nutrition, health, wash and shelter introduced by DG ECHO for funded operations.

Additionally there has been considerable advance in the main sectors such as WASH, shelter, nutrition, services in internally displaced or refugee camps... However, regarding Livelihoods programming there is still the need to have commonly agreed standard indicators evidenced-based to facilitate quality project design and results assessment.

Therefore, the goal of this list is to fill this gap, offering to humanitarian actors a list of Livelihoods Key Programming Indicators. This list aims to be adopted as a standardized way to measure and analyze livelihoods wide-impact (aggregating metrics from all livelihoods operations), and to facilitate the quality program design and reinforce consistency of the projects in Livelihoods.

The Livelihoods Resource Centre (LRC), in consultation with practitioners¹ (specialized in Livelihoods and Monitoring & Evaluation) from different organizations (and after analyzing more than thirty different indicators sets), has developed the livelihood key indicators' list (included in this document) as part of a coordinated effort to achieve a standardized tool that will enable a wide-sight or analysis of livelihood programs' impact and to improve organizations accountability.

1.1. Livelihoods Key Program Indicators List. Structure

This document provides to livelihoods practitioners and organizations with a list of Livelihoods Key Program Indicators developed by the IFRC-Livelihoods Centre within the framework of the ERC-ECHO².

¹ Detail information about organizations and consultants that have contributed to produce this Livelihoods Key Program Indicators list in “4. ACKNOWLEDGES”
² The ERC (Enhance Response Capacity) program financed by ECHO, is a global outreach project that has as objective “to contribute to build and strengthen the capacities of humanitarian actors for Livelihoods and Cash based responses in disaster risk reduction, emergency and first-recovery situations”. Even if the grant holder is Spanish Red Cross (the NS who is hosting the Livelihood Resource Centre), the project involves different organizations/partners working in consortium: LRC, IFRC, French Red Cross, Oxfam Intermon, CaLP (Cash Learning Partnership, composed of Oxfam GB, Save the Children, the British Red Cross, Action against Hunger / ACF International and the Norwegian Refugee Council).
Within this ERC-ECHO project, the LRC (Livelihoods Resource Centre) has developed two outcomes or products related to standardization of livelihoods indicators: The list of Key Program Indicators (shown in this document), and a Compilation list of livelihoods indicators. All the details about objectives, structure, definitions, etc., of these two
Livelihoods Key Program Indicators List

A total of twenty (20) Key Livelihoods Program Indicators have been identified. They are grouped under eight different categories (that were identified during the analysis process). These categories are (or are related to) livelihoods objectives/purposes (following the ECHO-KRI approach or pattern):

The assembling categories are:
- Achieving survival and/or livelihoods protection threshold
- Ownership and access to productive assets
- Productivity enhancement
- Increase and/or diversification of incomes
- Gain and application of productive knowledge
- Access to livelihoods support services and markets
- Disaster Risk Reduction and Natural Resources Management
- Livelihoods rights, policies and regulations improvement

These categories are not mutually exclusive, existing a closer cause-effect relationship between some of them (e.g. productivity enhancement → increase of incomes; application productive skills → productivity enhancement).

They have been defined to allow practitioners to find the indicators that better match with the project/program objectives.

For instance, if our program has as objective to increase population better practices to improve and protect livelihoods and natural resources.

We can select indicators from categories:
- “Gain and application of productive knowledge”
- “Disaster Risk Reduction and Natural Resources Management”

In order to make the indicator more comprehensible, in terms of the meaning, its purpose, how to measure it and its scope, each indicator has been defined together with the following complementary and definition elements:
- Indicator
- Description / Definition (with explanation of the rationale behind the indicator)
- Detail / disaggregate by (with detail information that could be included to the indicator to specify target group, geographical zone, etc.)
- Trend
- Data Source (including Unit of measurement detail)
- Measurement Guidance (as a guidance on methodology and consideration to take into account)

Also for each indicator, practitioners and users could also find some examples to support them in the indicators definition.

Outcomes are presented and explained in the Guide “ECHO. Livelihoods Indicators Guide”: Livelihoods Standard Indicators Tools Guide. Link: www.livelihoodscentre.org

Following ECHO KRI (Key Results Indicators) pattern, the project has identified eight objectives / purposes, to categorize (or assemble) the Livelihoods Key program indicators. These categories (objectives) range from the achievement of survival and/or livelihoods protection threshold (related to emergency and recovery), until the changes in the structures and processes that regulate and enable the livelihoods development environment.

Each objective/purpose, and depending on their nature or scope, contains between one and four indicators.
Livelihoods Key Program Indicators List

The details of the Livelihoods Indicators outcomes developed within this program (objective, definition, indicators elements, analysis dimensions, sources, etc.) are explained in the Livelihoods Indicators Guide.

1.2. Livelihoods Key Program Indicators List. Terminology and Notes

Acronyms and definitions: Acronyms and technical concepts, used in the indicator definition or description, are explained and detailed in the same indicator, and are also compiled at end of the document (3. DEFINITIONS AND ACRONYMS).

Format: Indicators definition use a specific format to allow their some use flexibility.
- <...>: different options to consider, select one of them
- [...]: extra information to include in the indicator that depends on the program definition, context, etc., (e.g. [specify the type of asset]).
- (...): explanatory comment

Notes:
1) **Measurement of guidelines** includes a list of secondary data sources that can be used, when adequate, to save time and money (when relevant and reliable); however, this can be changed if felt misleading.
2) **Disaggregated data / detail.** To measure disaggregation (by gender, age, or other group), remember that analysis should be done in a statistically significant way (do not extrapolate from a subset back to the larger sample unless it were statistically valid).
3) **Disaggregated data / detail by religious, ethnic or political minorities.** Be careful with the collection of this information. It can be seen as inclusion but could also compromise the independence and neutrality of the humanitarian spirit. In some areas, it is better not to collect this type of data for fear of reprisals.

2. LIVELIHOODS KEY PROGRAM INDICATORS LISTS

2.1. OBJECTIVE 1. Survival and Livelihoods Protection Threshold

"Change or improvement of household ability to meet survival and livelihood protection thresholds. It includes households’ capacity to respond to their immediate needs, to restore their livelihoods and the change in use of negative coping strategies"

<table>
<thead>
<tr>
<th>INDICATOR. 1</th>
<th>KRI-1-1A</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Number/percentage of targeted households [have enough &lt;food, cash, incomes&gt; to] meet their survival threshold</strong></td>
<td></td>
</tr>
</tbody>
</table>

**Description**
Change in household capacity to meet their survival threshold

This indicator uses the HEA/HES approach to determine households’ survival threshold (food needs), and population ability to meet their food needs, using their coping strategies or other strategies, as per the baseline.

- Includes food/cash distributions interventions
- Includes livelihoods restarting interventions (sources of food and income).

Remark: This indicator is more related to Food Security sector, but it is included because supporting households food needs contributes to protect their livelihoods.

**Definitions:**
- Survival threshold: The Survival Threshold represents the total income required to cover:
  - 100% of minimum food energy needs (2100 kcals per person), plus
  - The costs associated with food preparation and consumption (i.e. salt, soap, kerosene and/or firewood for cooking and basic lighting), plus
  - Any expenditure on water for human consumption.
- HEA: Household Economic Approach
- HES: Household Economic Security

**Detail / Disaggregate by:**
Geography/Livelihoods zone;
Head of household gender, age, disabilities, chronic diseases, dependency ratio, and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
Period to achieve the objective;

**Trend / Change:** Increase

**Data source:**
Both secondary and primary data collection can be used according to context.

**Measurement Guidance:**

---

5 Source: Practitioners’ Guide to HEA, Introduction to the Household Economy Approach Framework
Livelihoods Key Program Indicators List

- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
  In onset emergency, (if possible) frequency should be higher (on weekly, monthly basis) to ensure appropriateness of assistance.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. background, assessment information, reference to a normal situation).

Unit of Measurement: Household (most typical).
If percentage:
- Numerator: Number of households that have achieved the livelihoods protection threshold
- Denominator: Total number of targeted households

Data Collection methods:
Secondary data analysis;
Household surveys;
Post-distribution monitoring surveys/PDM;
Focus groups, Key Informant Interviews.

Needs/gap analysis can be done through various assessment methodologies. If a valid HEA / HES analysis is possible, this should be used as a starting point. Consider also the IHEA (Individual Household Economy Approach) methodology.

The coverage of energetic needs (2,100 kcal) is the basis of the measurement for this indicator.
Where HEA/HES/IHEA analysis is feasible, consider also measuring Dietary Diversity (DD), Food Consumption Score (FCS) as a complementary information to accurate it in terms of “quality” of the food coverage.

In emergency context food security is often measured through proxy indicators for which data collection and analysis is relatively easy. Recommended are HDDS/IDDS combined with CSI or one can use a FCS/CSI, in particular in areas where WFP has longitudinal food security data measured through the FCS.

Consider seasonal calendar and market price variations throughout the year to determine when to measure the indicator.

For more details on methodology:
The practitioners Guide to HEA:

Examples:
X% of targeted households (from those Y% are women-headed) in Gambella province meet their survival threshold by the sixth month of the program.

X% of targeted households (from those Y% are refugees) in Gambella province have enough cash to meet their survival threshold by the sixth month of the program.

INDICATOR. 2 KRI-1-1B
Number/percentage of targeted households [have enough <food, cash, incomes> to] meet their livelihood protection threshold

Description
Change in household capacity to meet their livelihood protection threshold
Livelihoods Key Program Indicators List

This indicator uses the HEA/HES approach to determine households’ livelihoods protection threshold, and population ability to meet their basic needs, using their coping strategies or other strategies, as per the baseline.

- Includes food/cash distributions interventions
- Includes livelihoods restarting interventions (sources of food and income)

**Definitions:**
- **Livelihoods protection threshold**: The Livelihoods Protection Threshold represents the total income required to sustain local livelihoods. This means total expenditure to:
  - Ensure basic survival needs, plus
  - Maintain access to basic services (e.g. routine medical and schooling expenses), plus
  - Sustain livelihoods in the medium to longer term (e.g. regular purchases of seeds, fertilizer, veterinary drugs, etc.), plus
  - Achieve a minimum locally acceptable standard of living (e.g. purchase of basic clothing, coffee/tea, etc.).

- **HEA**: Household Economic Approach
- **HES**: Household Economic Security

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Head of household gender, age, disabilities, chronic diseases, dependency ratio, and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;

**Trend / Change:**
- Increase

**Data source:**
Both secondary and primary data collection can be used according to context.

- **Baseline/Endline.** If multiyear programme consider also a mid-term evaluation.
  - In onset emergency, (if possible) frequency should be higher (on weekly, monthly basis) to ensure appropriateness of assistance.
- **Secondary data.** Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:** Household (most typical).

If percentage:
- **Numerator:** Number of households that have achieved the livelihoods protection threshold
- **Denominator:** Total number of targeted households

**Measurement Guidance:**
Use HEA/HES measure approach.
Consider also the IHEA (Individual Household Economy Approach) methodology.

Consider seasonal calendar and market price variations throughout the year to determine when to measure the indicator.

For more details on methodology:
The practitioner guide to HEA:

---

6 Source: Practitioners’ Guide to HEA, Introduction to the Household Economy Approach Framework
Livelihoods Key Program Indicators List

**Data Collection methods:**
Secondary data analysis;
Household surveys;
Focus groups, Key Informant Interviews.

**Example:**
X% of targeted pastoralist households in Dawa Region meet their livelihoods protection threshold at the end of the program.

<table>
<thead>
<tr>
<th>INDICATOR. 3</th>
<th>KRI-1-2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number/percentage of targeted population's livelihoods &lt;restored to, improved from&gt; &lt;pre disaster level, baseline level, last year -same period-, normal year&gt;</td>
<td></td>
</tr>
</tbody>
</table>

**Description**
Change in population's livelihoods compared with a reference level (pre disaster level, baseline level, etc.)

This indicator measures the population / households / productive organizations / micro, small and medium enterprises (MSME) capacity to restore their livelihoods (source of food and income).
- Includes in-kind distributions (seeds, livestock, tools, etc.) that allow targeted population to restore their livelihoods
- Includes cash distribution interventions to restart targeted population's livelihoods
- Includes all kind of livelihoods restarting interventions (sources of food and income)Includes in-kind distributions (seeds, livestock, tools, etc.) that allow targeted population to restore their livelihoods

**Definitions:**
- MSME: micro, small and medium enterprises (formal or informal)

**Detail / Disaggregate by:**
Geography/Livelihoods zone;
Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
Period to achieve the objective;

**Trend / Change:**
Increase or restore

**Data source:**
Both secondary and primary data collection can be used according to context.
- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g.

**Measurement Guidance:**
Measure this indicator asking households directly about the recovery of their livelihoods activity, and through questions related to it (e.g. number of Ha planted and/or harvested number of daily labour hired, number of heads of livestock, etc.).
Livelihoods Key Program Indicators List

<table>
<thead>

<tr>
<td><strong>Description</strong></td>
<td>Change of households' coping strategies compared with pre disaster levels, or baseline level, last year -same period-, normal year.</td>
</tr>
<tr>
<td><strong>Reducing coping strategies indicates improved food security, recovery of food and income sources, less pressure on alternative coping strategies and improved resilience.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Affected households may use coping strategies to deal with a reduced ability to access food, related to change of food consumption behavior, and other adaptation/response strategies that could be damaging for households/people livelihoods.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Definitions:</strong></td>
<td></td>
</tr>
<tr>
<td>• <strong>Coping Strategies:</strong> are mechanisms that people choose as a way of living through difficult times. They are usually set off by events affecting their livelihoods and way of living. Some coping strategies are not damaging to livelihoods and are easily reversible: for example, short-term dietary changes, migration of individuals for work, use of savings or solidarity networks. Other strategies may be damaging and tend to be harder to reverse: for example, sale of land, sale of ‘productive’ assets, intensive use of wood from nearby causing deforestation, taking children out of school to make them work (child labour) or prostitution.</td>
<td></td>
</tr>
</tbody>

# Livelihoods Key Program Indicators List

<table>
<thead>
<tr>
<th>Geography/Livelihoods zone; Head of household gender, age, disabilities, chronic diseases, dependency ratio, and any other relevant criteria, such as urban/rural, religious, ethnic or political identities; Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)</th>
<th>Period to achieve the objective; Decrease Decrease must be relevant.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Data source: Both secondary and primary data collection can be used according to context.</th>
<th>Measurement Guidance: Change in Coping Strategies can be measured by the Coping Strategy Index, the Household Hunger Scale or similar hunger experience indicator.</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Baseline/Endline. If multiyear programme consider also a mid-term evaluation. In onset emergency, (if possible) frequency should be higher (on weekly, monthly basis) to ensure appropriateness of assistance. - Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).</td>
<td>CSI (Coping Strategy Index) comprises a series of questions about how households manage to cope with a shortfall in food, that looks at both the frequency of a coping behavior (how often is the strategy used) and severity (what degree of food insecurity do they suggest). Can be used for targeting and monitoring. To use this indicator (due the fact that coping strategies can be measure using multiple components), it’s important to define (and rank) the list coping strategies that we are going to measure over the project at the beginning of the project –assessment-, based on targeted group and context, and including relevant coping strategies related to livelihoods protection (e.g. sale of productive assets, migration, consumption of seed stock)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Unit of Measurement: Household. If percentage:</th>
<th>Measure: &gt; Number of coping strategies used relative to baseline &gt; Frequency of use of coping strategies Decrease/reduction threshold must be defined in advance using baseline and secondary information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Numerator: Number of households that have reduced their coping strategies - Denominator: Total number of targeted households</td>
<td>- Standard CSI for food security and livelihood is preferred. - Ranking can support assessing change and importance of coping strategy pattern. - Expanded context-adapted CSI for livelihoods can be developed if time and means allow. Note that comparison across livelihood zones might be compromised. - Needs to consider potential changes in seasonal coping and explanation of the same, e.g. normality vs abnormality.</td>
</tr>
</tbody>
</table>

**Watch Out For!** - Coping strategies may vary between cultural contexts and should be verified and adapted where necessary.
Coping strategies vary in terms of severity. Accordingly, the use of coping strategies over a long period will have a different effect on a household’s ability to recover.

For more details on methodology:

Example:
*At the end of the program X% of targeted households (from those Y% are women-headed) in the agro-pastoralist area of Awsard reduce their coping strategies compared with baseline.*
2.2. OBJECTIVE 2. Ownership and Access to Productive Assets

“Change in number of productive assets owned or accessed by targeted population (households, communities, productive associations).

Includes the capacity to protect or replace productive assets after a shock, increase the number and/or the improvement or access to improved assets. Considers the equitable access to productive assets”

<table>
<thead>
<tr>
<th>INDICATOR. 5</th>
<th>KRI-2-1</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Number/percentage of targeted population &lt;households, communities, productive organizations, MSME&gt; are able to &lt;protect, replace, increase, improve&gt; their productive assets (specify if needed) [above &lt;pre disaster level, baseline level, a normal year, last year -same period-&gt;] [in a safe manner]</strong></td>
<td></td>
</tr>
</tbody>
</table>

**Description**

Change in number or quality of productive assets owned or accessed by targeted population.

Increased number, improvement, preservation or reduced depletion of livelihoods productive assets indicates increase in food security, economic security and resilience.

This indicator is focused on equipment, infrastructures and inputs provision and access, supported with different mechanisms (cash, in-kind, income/employment support, safety nets, etc.).

- Includes group and individual agriculture assets/inputs supply (e.g. seeds, tools, irrigation systems, land)
- Includes livestock, pisciculture, aquaculture, apiculture, cuniculture, etc., support (e.g. distribution of productive assets, reduction of depletion, etc.).
- Includes group and individual IGA (income generation activities) assets distribution/support.
- Includes any type of assets support (recovery, improvement) to agro based, non-agro based, or service based income generating activity, can include value addition or transformation etc.
- Includes the support on improved productive assets (e.g. improved seeds)
- Includes household/community/productive association creation or reconstruction of productive infrastructures.

At community level we need to specify the type of community/group and to indicate the inclusion/access of all members of these groups to the common assets.

This indicator also include the "build back better" approach, which not just recover what households/productive groups had before the crisis/shock, but also improve it to make them more resilient and sustainable.

**Definitions:**

- MSME: micro, small and medium enterprises (formal or informal)
- Safe manner: To include considering the context (mostly in conflict areas). Interventions that promote the replacement, increase or improvement of productive assets must assure security of targeted population.

**Detail / Disaggregate by:**

- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
- Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;

**Trend / Change:**

Restore or increase

</thead>
<tbody>
<tr>
<td>Period to achieve the objective;</td>
<td></td>
</tr>
</tbody>
</table>

### Data source:
Both secondary and primary data collection can be used according to context.
-Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
-Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

### Unit of Measurement:
Population, but can also be households or productive organizations, or MSME.
If percentage:
- Numerator: Number of targeted population able to <protect, restore, increase, improve> their productive assets.
- Denominator: Total number of targeted population

### Data Collection methods:
Secondary data analysis; Household/productive organizations/etc. survey and focus groups; Key Informant Interviews; Assets distribution reports; MSME / productive organizations’ assets records;

### Measurement Guidance:
Measure the number of productive assets owned (e.g. livestock heads, land, tools, equipment) or able to access (e.g. seed for the next plantation, access to land).
Comparison of number of productive assets should be done related to:
- normal year (note that in some cases targeted population could have problems to inform about “a normal year” mostly in slow onset disasters)
- baseline
- last year -at the same period-
[primary production] Consider potential changes in seasonal asset ownership and active seasonal depletion or explanation of the same (e.g. sold a goat to buy food at the beginning of the lean season; destocking, pests and diseases prevalence depending, etc.).
Consider market price variations throughout the year.

### Examples:
**At the end of the program X% of targeted households (from those Y% are household with a high dependency ratio) in Podor region are able to restore their productive assets above pre disaster level**

**At the end of the program X targeted productive organizations (from those Y are women organizations) in Podor region are able to increase their productive assets above baseline level.**

### INDICATOR. 6  KRI-2-2

<table>
<thead>
<tr>
<th>Number/percentage of targeted population &lt;households, productive organizations, MSME&gt; have enough productive assets (specify the type of asset if necessary) to &lt;recover, strengthen&gt; their livelihoods</th>
</tr>
</thead>
</table>

**Description**
Change in number of targeted population that have enough productive assets to recover, resume or strengthen their livelihoods
**Livelihoods Key Program Indicators List**

Increased number, improvement, preservation or reduced depletion of livelihoods productive assets to ensure households/productive associations/MSMEs capacity to restore or improve their livelihoods activities (compared with baseline or pre-shock).

This indicator is focused on equipment and inputs provision and access, supported with different mechanisms (safety nets, cash, in-kind, income/employment support, etc.) and its comparisons with beneficiaries’ needs. This indicator also include the “build back better” approach, which not just recover what households/productive groups had before the crisis/shock, but also improve it to make them more resilient and sustainable.

**Definitions:**
- **MSME:** micro, small and medium enterprises (formal or informal)

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
- Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;

**Trend / Change:**
- Restore or increase

**Data source:**
Both secondary and primary data collection can be used according to context.
- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:** Population, but can also be households or productive organizations, or MSME. If percentage:
- Numerator: Number of targeted population with enough productive assets to <restore, strengthen> their livelihood activity.
- Denominator: Total number of targeted population

**Data Collection methods:**
Secondary data analysis;
Household/productive organizations/etc. survey and focus groups;
Key Informant Interviews;
Assets/cash distribution reports;
Productive organizations/MSMEs’ assets records;

**Measurement Guidance:**
Measure the number of productive assets owned (e.g. livestock heads, land, tools, equipment) or able to access (e.g. seed for the next plantation), and comparison of the achievement (or preservation) with the needs to restart, resume or strengthen the livelihoods activity.
Measure of needs could be difficult depending on the livelihoods activity.

[primary production] Consider potential changes in seasonal asset ownership and active seasonal depletion or explanation of the same (e.g. sold a goat to buy food at the beginning of the lean season; destocking, pests and diseases prevalence depending, etc.).

Consider market price variations throughout the year.
### Livelihoods Key Program Indicators List

#### Examples:

- **X** targeted productive organization *(from those Y are women members)* in the urban area of Kirehe district have enough productive assets to recover their livelihoods *by the sixth month of the project.*

- **X%** of targeted households in Kirehe district have enough irrigation points to strengthen their livelihoods activity *at the end of the project.*

<table>
<thead>
<tr>
<th>INDICATOR. 7</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Number of livelihoods productive assets/infrastructures (specify, e.g. productive lands, transformation infrastructures, etc.) &lt;restored to, improved from, build&gt;</strong></td>
</tr>
<tr>
<td>[If necessary, specify the reference period for comparison &lt;pre disaster level, baseline level&gt;]</td>
</tr>
</tbody>
</table>

**Description**

**Change in number and/or quality of livelihoods productive assets/infrastructures**

Increased number, improvement or preservation of livelihoods assets and infrastructures indicates increase in food security, economic security and resilience. This indicator is aligned with the two previous indicators, but focused infrastructures and productive assets, that at the same time support the production capacity of households/communities/productive associations.

- Includes all kind of livelihoods physical/natural assets recovery activities (e.g. productive land, forestry area, river basin, transformation infrastructures)
- Includes group and individual IGA (income generation activities) infrastructures recovery or improvement.
- Includes agriculture, livestock, pisciculture, aquaculture, apiculture, cuniculture, etc., infrastructure support (for their recovery or improvement).
- Includes household/community/productive association creation or reconstruction of productive infrastructures.

At community level we need to specify the type of community/group and to indicate the inclusion/access of all members of these groups to the common assets.

This indicator also include the “build back better” approach, which not just recover what households/productive groups had before the crisis/shock, but also improve it to make them more resilient and sustainable.

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;

**Trend / Change:**
- Restore or increase

**Data source:**
- Both secondary and primary data collection can be used according to context.
  - Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
  - Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g.

**Measurement Guidance:**
- Measure of infrastructures build/rebuild, Ha of recovery lands/forestry areas, meter of recover/improved irrigation channels, etc.
- Depending on the type of intervention, the change should be measured using technical methods.
Livelihoods Key Program Indicators List

<table>
<thead>
<tr>
<th>Assessment information, reference to a normal situation</th>
<th>It is important to define how to measure the change/improvement before using the indicator. If for example we want to measure the number of hectares recovered after floods, it’s necessary to define in advance the recovery techniques (e.g. cleaning up of crop lands, construction-reconstruction of terraces and embankments).</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Unit of Measurement:</strong> Depending on the livelihood infrastructure/asset (e.g. forest Ha, coastline meter-kilometer, number of water sources, etc.)</td>
<td></td>
</tr>
<tr>
<td><strong>Data Collection methods:</strong> Secondary data analysis; Livelihoods infrastructure recovery measure; Household surveys and focus groups; Key Informant Interviews.</td>
<td></td>
</tr>
</tbody>
</table>

**Examples:**

- *At the end of the project* X Ha of agricultural land *in Mahama sector* restored to pre disaster level
- *X Km of irrigation channels in rural area of Kirehe district* restored and improved from base-line level
- *X cooperative warehouses build in Kihere district at the end of the project*
2.3. OBJECTIVE 3. Productivity Enhancement

“Increase of productivity (primary production, income generation activities, etc.), considering that it means the relationship between production and resources/time dedicated to obtain them. Includes the increase of production, the reduction of resources and/or the reduction of production losses”.

<table>
<thead>
<tr>
<th>INDICATOR. 8</th>
<th>KRI-3-1</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Number/percentage of targeted population &lt;households, productive organizations, MSME&gt; improve their production by (specify how much)</strong> [specify type of production if necessary], [due to &lt;new practices, new technology, trainings, etc.&gt;]</td>
<td></td>
</tr>
</tbody>
</table>

**Description**
Change in targeted population production and/or the production quality compared to a normal year or baseline level.

This indicator is focused on production increase (or improvement) supported by different mechanisms (cash/in-kind productive assets, technical support, new or improved productive assets, etc.).
- Includes staple crop, vegetable and agroforestry production support.
- Includes livestock, pisciculture, aquaculture, apiculture, cuniculture, etc., support.
- Includes the use of improved productive assets (e.g. improved seeds)
- Includes group and individual IGA support (handicraft, byproducts, primary production transformation, etc.).
- Includes education training and capacity building activities.
- Includes household / community / productive association / MSME creation or reconstruction of productive infrastructures that allow the improvement of production (irrigation infrastructures, etc.).

**Definitions:**
- MSME: micro, small and medium enterprises (formal or informal)
- IGA: income generation activities

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
- Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;

**Trend / Change:**
Increase

**Data source:**
Both secondary and primary data collection can be used according to context.
- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g.

**Measurement Guidance:**
Improvement/increase threshold must be defined in advance using baseline and secondary information.
[primary production] Consider seasonal calendar to determine when to measure the indicator (e.g. main
Livelihoods Key Program Indicators List

<table>
<thead>
<tr>
<th><strong>assess</strong>ment information, reference to a normal situation</th>
<th>harvest, pests and diseases prevalence depending on the period</th>
</tr>
</thead>
</table>

**Unit of Measurement:** Population, but can also be households or productive organizations, or MSME. If percentage:
- Numerator: Number of targeted population that have improved their production (fixed threshold).
- Denominator: Total number of targeted population

**Data Collection methods:**
- Secondary data analysis;
- Household/ productive organizations/etc. survey and focus groups;
- Key Informant Interviews;
- Production monitoring reports/records.

If necessary, link the increase of the productivity/or the quality of the products with the new practices or technologies provided by the project/program (e.g. new kind of cash crop)
Note that improvement of quality should require some certification/quality tests.

**Examples:**

X% handcraft targeted cooperatives ([from those Y% are refugee members] in Bangui improve their production by 2% during the program period.

X targeted households ([from those Y are women-headed] in Dawa province improve their staple crops production by 2% during the program period due to the use of improved seeds.

**INDICATOR. 9**

<table>
<thead>
<tr>
<th><strong>KRI-3-2</strong></th>
</tr>
</thead>
</table>

Number/percentage of targeted population <households, productive organizations, MSME> reduce their production losses by (specify how much) [specify type of production if necessary], [resulting from use of improved practices (specify practices)]

**Description**

Change in targeted population production losses compared to a baseline level (or normal year, same period last year, etc.) resulting from use of improved practices.

Indicator focused on reducing production losses (e.g. post-harvest crop loss, herd heads, etc.) through product processing, storage and preservation improvement, use of new technologies, reduction of herd diseases, etc.
- Includes staple crop, vegetable and agroforestry production conservation/processing.
- Includes livestock, pisciculture, aquaculture, apiculture, cuniculture, etc., veterinary and conservation support.
- Includes group and individual IGA support (handicraft, byproducts, primary production transformation, conservation good practices etc.)

**Definitions:**
- MSME: micro, small and medium enterprises (formal or informal)
- IGA: income generation activities
### Livelihoods Key Program Indicators List

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
- Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)

**Period to achieve the objective;**

**Trend / Change:**
- Decrease

**Data source:**
- Both secondary and primary data collection can be used according to context.
  - Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
  - Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:**
- Population, but can also be households or productive organizations, or MSME. If percentage:
  - Numerator: Number of targeted population that have reduced their production losses.
  - Denominator: Total number of targeted population

**Data Collection methods:**
- Secondary data analysis;
- Household/productive organizations/etc. survey and focus groups;
- Key Informant Interviews;
- Production monitoring reports/records.

**Measurement Guidance:**
- Losses reduction threshold must be defined in advance using baseline and secondary information.

- For some livelihoods activity this indicator is difficult to measure. If we need to compare initial and final production losses (or the losses in a normal year/period) due to the use of production processing or conservation.

- Otherwise, we can measure the difference in incomes (increase of revenues due to the sale of processing production) or the reduction in expenses food/seeds (due to production conservation).

- [Primary production] Consider seasonal calendar to determine when to measure the indicator.

- [Livestock, agriculture] measure the disease/pests cases before and after.

**Examples:**

- **X% of targeted gardening women associations (from those Y% belong to household with a high dependency ratio) in Kiffa province reduce by at least X% their production losses resulting from use conservation preservation and transformation practices in the first year of the program.**

- **At the end of the project, X% of the pastoralist targeted households in Dawa province reduce by at least Y% their herds losses resulting from use of thanks to improved practices.**
## 2.4. OBJECTIVE 4. Increase and/or Diversification of Incomes

“Increase and/or diversification of household’s income in a sustainable way. Includes all kind of interventions that promote and strengthen formal or informal employment creation (considering both employment and self-employment), promote the income generation sources diversification, and stabilize and strengthen existing sources of incomes to increase the net incomes.”

<table>
<thead>
<tr>

<th>KRI-4-1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number/percentage of targeted population &lt;households, productive organizations, MSME&gt; that &lt;stabilize, improve&gt; their net income by (specify the improvement) during a defined period (specify), [due to (specify if necessary the livelihoods activity and the cause of improvement)].</td>
<td></td>
</tr>
</tbody>
</table>

**Description**

Change in number of targeted population stabilizing or improving their <monthly/weekly/annual> net income for a defined period (e.g. six, twelve months).

Stabilizing and Increasing net income indicates: or improvement of productivity (primary production, IGA), or improvement of market-links (value chain, sell prices), or efficient application of productive/business skills (reduce of expenses), or access to new or better-paid employment.

To show sustainability it is necessary that income increase or stabilization last a defined period of time (6 months, 12 months), depending on the duration of the program.

Increase of income (or stabilized income) should be fixed and (if possible) reference to context wage/salary/etc.

- Includes any type of agro based, non-agro based, or service based income generating activity, can include market chain support, value addition or transformation etc.
- Includes access to employment.
- Includes strengthening of existing sources of income, or creation/diversification of sources of income.

**Definitions:**

- MSME: micro, small and medium enterprises (formal or informal)
- IGA: income generation activities

**Detail / Disaggregate by:**

- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
- Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;

**Trend / Change:**

- Stabilize or increase
- Increase must be relevant

**Data source:**

- Both secondary and primary data collection can be used according to context.
  - Baseline/Endline. If multiyear programme consider also a mid-term evaluation.

**Measurement Guidance:**

- Data collection should show the stability/increase of household incomes over the defined period.
- Measurement period and frequency depend on the income generation activity.
Livelihoods Key Program Indicators List

- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).
- Increase of income (or stabilized income) must be relevant. It should be fixed and (if possible) reference to context wage/salary/etc.
- Unit of Measurement: Population, but can also be households or productive organizations, or MSME. If percentage:
  - Numerator: Number of targeted population that have improved/stabilized their net income.
  - Denominator: Total number of targeted population
- Data Collection methods:
  Secondary data analysis;
  Income records (MSME, productive organization);
  Household survey;
  Focus groups, Key Informant Interviews.
- Depending on the source of incomes, consider to collect monthly records.
- Consider seasonal calendar to determine when to measure the indicator.
- Take into consideration that measurement difficulty depends on the income generation activity.
- Example:
  *Number of targeted population in Conakry urban area (from those Y% are under 26 years old) that improve their net income to the interprofessional minimum wage during at least six months.*

**INDICATOR. 11**

**KRI-4-2**

**Number/percentage of targeted population <households, productive organizations, MSME> diversify (quantify if necessary) their incomes generation activities (specify source/s if necessary) [increasing their net income by (specify the improvement)].**

**Description**

**Change in targeted population incomes generation activities sources through participation in the program**

Significant change in income sources suggests reduced vulnerability and increased food/incomes access and resilience.

Income sources breakdown most commonly used: sale of own production (crops, livestock, etc.), sale of wild gathered items, casual labour, skilled labour, salary, petty trade and commerce/business, value addition or transformation, loans, remittances, gifts and assistance.

- Includes any type of agro based, non-agro based, or service based income generating activity, can include market chain support, value addition or transformation etc.
- Includes agriculture and livestock diversification.
- Includes the diversification of production within the same livelihoods activity (e.g. crop diversification)
- Includes access to employment.
**Livelihoods Key Program Indicators List**

Income sources diversification can (or cannot) be accompanied with an increase of incomes, in this sense the last part of the indicator "increasing their net income by specify the improvement" is optional, depending on the program/project objectives.

**Definitions:**
- MSME: micro, small and medium enterprises (formal or informal)

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
- Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;

**Trend / Change:**
- Increase

**Data source:**
- Both secondary and primary data collection can be used according to context.
  - Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
  - Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:** Population, but can also be households or productive organizations, or MSME. If percentage:
  - Numerator: Number of targeted population that have diversified their sources of income.
  - Denominator: Total number of targeted population

**Data Collection methods:**
- Secondary data analysis;
- Income records (MSME, productive organization);
- Household surveys and focus groups;
- Key Informant Interviews.

**Measurement Guidance:**
- Commonly measuring changes in type and diversity of income sources, and proportion towards the overall income of the household.
- Data collection should show the increase of household incomes due to the diversification of the income generation sources.
  [primary production] Consider seasonal calendar to determine when to measure the indicator (e.g. main harvest, pests and diseases prevalence depending on the period.)
  Consider market price and labour wages according to season variations throughout the year.
  Link the increase of incomes (if so) with the new sources of incomes.
  Take into consideration that measurement difficulty depends on the income generation activity.

**Example:**
- **with income increase:**
  X% of targeted small-scale livestock holders from Dawa region (from those Y% are women headed) diversify their incomes generation activities at the end of the project, increasing their net income by Z%.
- **without income increase:**

---

**Livelihoods Centre**

---

21
Livelihoods Key Program Indicators List

**INDICATOR. 12**

**Number/percentage of targeted population employed or self-employed in sustainable livelihoods activities (specify if necessary) for a defined period.**

**Description**

*Change in the number of people employed or self-employed in sustainable livelihoods activities for a defined period.*

To show sustainability, employment or self-employment should last a defined period of time (6-12 months), and show quality aspects (work conditions).

- Includes the increase of people employed or self-employed
- Includes the increase of job created
- Consider formal and informal employment
- Highlight the equally of opportunities for men/women; youth; other remarkable group (e.g. ethic, religious)

Equal opportunities for women/youth/other groups applies depending on the program, normally when the employment/self-employment intervention is not addressed to a specific group.

- It doesn't includes cash for work interventions (temporary employment)

**Detail / Disaggregate by:**

- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
- Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;

**Trend / Change:**

Increase

**Data source:**

Both secondary and primary data collection can be used according to context.

- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:**

Population, but can also be households or productive organizations, or MSME. If percentage:

- Numerator: Number of targeted population employed or self-employed.
- Denominator: Total number of targeted population

**Measurement Guidance:**

Employment/self-employment sustainability should be defined (e.g. type of contract; duration of the employment/self-employment since it started - six months / one year-, number of client contracts -for self-employments/IGA-, etc.).

Consider not just the access to employment (self-employment) in a quantitative way, but also in quality: job quality (work conditions) and/or beneficiaries’ self-confidence (qualitative change).

Job creation might be difficult to measure unless: the intervention is long term, or it is measured against small business or IGA which create employment for others.

---

X% of targeted small-scale livestock holders from Dawa region (from those Y% are women headed) diversify at least the Z% of their incomes generation activities at the end of the project
Data Collection methods:
Secondary data analysis;
Household survey and focus groups;
Key Informant Interviews;
Salary records;
MSME/productive organization survey and records.

Example:
X of affected vulnerable workers in Conakry urban area (from those Y are women) are employed in livelihoods activities (micro-business, small and medium enterprises) for six or more months through the intermediation program.

INDICATOR. 13
KRI-4-4
Number of sustainable micro, small and medium enterprises (MSME) initiatives (specify if necessary) <created, strengthened> due to the intervention.

Description
Change in the number of employment / self-employment initiatives or their capacity due to the intervention.

To show sustainability initiatives should last a defined period of time (6 months, 12 months).
- Includes micro, small and medium enterprises (MSME) initiatives of all kind of sectors (agro-business -primary production transformation; transport; new technologies related business -internet, mobile phone; retailers/dealers; carpenters; tailors; hostelry, etc.)
- Includes group and individual income generating activities for contribution to household economy.
- Highlight the equally of opportunities for men/women; youth; other remarkable group (e.g. ethnic, religious)

Equal opportunities for women/youth/other groups applies depending on the program, normally when the employment/self-employment intervention is not addressed to a specific group.
The focus of this indicator is in the creation or strengthening of employment initiatives, not in the number of new people employed, even if both indicators can be used in the same kind of projects/programs.

Definitions:
- MSME: micro, small and medium enterprises (formal or informal)

Detail / Disaggregate by:
Geography/Livelihoods zone;
Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
Period to achieve the objective;

Trend / Change: Increase

Data source: Measurement Guidance:
Both secondary and primary data collection can be used according to context.
- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:** MSME

**Data Collection methods:**
- Secondary data analysis;
- MSME records;
- Focus groups, Key Informant Interviews.

To measure the creation of new MSME initiatives we can use all formal documentation and records generated to achieve it.

To measure the strengthening of existent MSME we could use the production/sales/clients/stocks records as a base to compare between baseline and endline. Sustainability criteria should be defined and measure (e.g. progression of the number of employees over a period of time, number of client contracts, buys and sales records, infrastructures and productive assets owned, etc.).

**Example:**
X sustainable micro and small businesses created in Port au Prince urban area (from those Y are managed by under 26 years old) that have achieved business objectives at the end of the program due to the intervention.
2.5. OBJECTIVE 5. Gain and Application of Livelihoods Activities Knowledge

“Improvement of livelihoods activities knowledge and application of these livelihoods new practices/ knowledge/techniques; it includes both aspects GAIN OF KNOWLEDGE and APPLICATION of this new knowledge for all kind of livelihoods activities (primary production, transformation, etc.)”

<table>
<thead>
<tr>
<th>INDICATOR. 14</th>

</tr>
</thead>
<tbody>
<tr>
<td>Number/percentage of targeted population provided with new &lt;skills, knowledge&gt; to &lt;strengthen, diversify, protect&gt; their livelihoods [specify if necessary: primary production, MSME, compete in the job market, etc.]</td>
<td></td>
</tr>
</tbody>
</table>

**Description**

Change in number of people equipped with new skills/knowledge strengthen, protect or diversify their livelihoods thanks to the program/project

Increase of skills/knowledge to improve/strength/launch household livelihoods activities.
- Includes all kind of education training and capacity building activities developed by extensionist workers, organization’s trainers, etc.
- Includes skills to grow/launch a business, get a paid job, compete in job market
- Includes skills / knowledge to improve primary production: staple crop, vegetable and agroforestry production, livestock, pisciculture, aquaculture, apiculture, cuniculture production, etc.
- Includes skills/knowledge to strength targeted population’s micro-small or medium enterprises.

**Definitions:**
- MSME: micro, small and medium enterprises (formal or informal)

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Gender, age, disabilities, chronic diseases, and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders)
- Period to achieve the objective;
- Consider disaggregation of information by trained and non-trained households.

**Trend / Change:**
- Increase

**Data source:**
- Both secondary and primary data collection can be used according to context.
  - Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
  - Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information).

**Unit of Measurement:**
- Population (trained people). If percentage:
  - Numerator: Number of targeted population that...

**Measurement Guidance:**
- Measure of the gained knowledge.
  - Compare them with the needed skills to develop a specific livelihoods activity (educational plan, standardized extension trainings, etc.).
  - This should be done by training or session test and not linked only to participation in training or sessions.
Livelihoods Key Program Indicators List

| has gained new knowledge / skills. |
| Denominator: Total number of trained people |

**Data Collection methods:**
Secondary data analysis; Focus groups, Key Informant Interviews. Knowledge or KAP Survey; Pre & post training evaluation; 6-12 months after training survey;

**Examples:**
*At the end of the project X% of targeted population in Gambella (from those Y% are refugees) equipped (or provided) with new skills to launch a new business.*

*At the end of the project X% of targeted population in the urban area of Sidon district (from those Y% are women) provided with new skills to compete in the job market.*

<table>
<thead>

</tbody>
</table>

**Description**
Change in number of population (households, productive organizations, MSME) with improved access to livelihoods support services (veterinary services, financial services, trainings, etc.) and/or markets.

Livelihoods support services are all kind of services that allow improve or strength livelihoods activities and their productivity. This indicator measures the access to these services:

- Includes improvement of linkages between markets and small holders producers (to allow them to improve or to obtain incomes from the own production)
- Includes access to credit and other financial services (insurances, microcredits).
- Includes access to technical services such as trainings (public extensionist/extension workers), other productive services (e.g. veterinary services, business support services, etc.), or legal, financial, and networking advice.
- Includes access to legal services relating to employment, work permits or business registration permits
- Includes all formal and informal services

**Definitions:**

- MSME: micro, small and medium enterprises (formal or informal)

**Detail / Disaggregate by:**
Geography/Livelihoods zone;
Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);
Head of household gender, age, disabilities, chronic diseases, dependency ratio (if households), and any other relevant criteria, such as urban/rural, religious, ethnic or political identities;

<th>Geography/Livelihoods zone; Gender, age, disabilities, chronic diseases (of the support service holder) and any other relevant criteria, such as urban/rural, religious, ethnic or political identities; Period to achieve the objective;</th>
<th>Increase</th>
</tr>
</thead>
</table>

**Data source:**
Both secondary and primary data collection can be used according to context.
- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:** livelihoods support service, market

**Data Collection methods:**
Secondary data analysis;
Service availability / coverage assessment in a geographical area.
Focus groups, Key Informant Interviews;
Livelihoods support services’ records (Financial institutions records, etc.).
Observation

**Measurement Guidance:**
Depending on the type of service, the indicator measure:
- the number of services available;
- the change in service coverage (rate de services par targeted population);
- the improvement of the service (e.g. formalized, increase in the number of credits/amount of credits).

**Example:**
At the end of the project X% of targeted extension workers from Dawa region are available to work with communities through program intervention.

X% of supported microfinance institutions (MFI) in Cayes Jacmel district strengthened and showing a positive return on average through program intervention
2.7. OBJECTIVE 7. Disaster Risk Reduction and Natural Resources Management

“Protection and Strengthening of household/community livelihoods through Disaster Risk Reduction, Climate Change Adaptation and Natural Resources Management practices. Includes all kind of activities aimed to strengthen, adapt and protect households/community livelihoods and/or their productive assets/capitals (such as natural or physical capital) against natural hazards and damaging production practices.”

</tr>
</tbody>
</table>

Description
Change in number of population (households, communities, productive organizations, MSME) applying key practices in DRR, NRM or CCA to strengthen and/or protect their livelihoods activities

Livelihoods strengthening and protection through DRR and NRM includes:
- The application of good productive practices to protect natural productive resources (land conservation, improvement of green cover, water collection and water use improvement, embankments)
- The creation of household or community infrastructures to protect livelihoods assets against natural or human hazards (e.g. livestock shelters, seeds banks)
- The use or adaptation of agriculture production and livestock to climate/weather conditions (drought adapted seeds, etc.)
- Initiatives or projects that reduce or eliminate livelihoods damaging production practices (climate change mitigation, natural resources over exploitation, etc.)
- The use of insurances to cope with primary production/productive assets losses (e.g. drought prone areas)
- The use of destocking techniques
- Other community/group initiatives to protect their livelihoods assets and production (e.g. distaste risk reduction actions, surveillance mechanisms)

Definitions:
- MSME: micro, small and medium enterprises (formal or informal)
- DRR: disaster risk reduction
- NRM: Natural Resources Management refers to the sustainable utilization of major natural resources, such as land, water, air, minerals, forests, fisheries, and wild flora and fauna. Together, these resources provide the ecosystem services that underpin human life.
- CCA: Climate Change Adaptation refers to the adjustment in natural or human systems in response to actual or expected climatic stimuli or their effects, which moderates harm or exploits beneficial opportunities.

Detail / Disaggregate by:
Geography/Livelihoods zone;
Gender, age, disabilities, chronic diseases (if individuals, associations members, etc.);

Trend / Change: Increase

<th>INDICATOR. 19</th>
<th>KRI-7-2</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Number of targeted natural resources (specify) under improved natural resource management</strong></td>
<td></td>
</tr>
</tbody>
</table>

**Description**

*Change in number of natural resources under improved management*

Natural resources management is a basic action to protect and strengthen productive natural resources (natural capital). The improvement of natural resources management aims to reduce the impact on the targeted population’s livelihoods of the current and future emergencies (floods, droughts, landslides) as well as to improve primary production productivity.

- Includes land use and land conservation techniques
- Includes improvement of green cover (including forest, farm and pasture land)
- Includes water collection and use improvement
- Includes natural resources protection infrastructures (e.g. embankments, flood diversion channels)
- Reduction of natural resources degradation (e.g. wood for charcoal)
- Disaster risk reduction activities focused on natural resources protection

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Period to achieve the objective;

**Trend / Change:**
- Increase

**Data source:**
Both secondary and primary data collection can be used according to context.
- Baseline/Endline (related to the specific natural resource targeted). If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:** Depending on the Natural Resource (e.g. forest Ha, coastline meter-kilometer, number of water sources, etc.)

**Data Collection methods:**
- Secondary data analysis;
- Natural resource measure;
- Household surveys and focus groups;
- Key Informant Interviews.

**Measurement Guidance:**
Measure of land/forestry hectares, coastline kilometers, soil conservation infrastructures units/kilometers, etc.

Depending on the type of intervention, the change should be measured using technical methods (e.g., natural resources showing improved biophysical conditions).

Consider referring to potential DRR/NRM practices or projects that are setting up by the Government or other organizations in the area, as a mean to harmonize ongoing approaches in the same geographical area.

It is important to define how to measure the change/improvement before using the indicator. If for example we want to measure the number of hectares under soil conservation techniques, it’s necessary to define them before or define how many among all the possible techniques (e.g. tree reforestation, use of organic fertilizers, construction of terraces and embankments).
### Livelihoods Key Program Indicators List

#### Example:

- **X Ha of agricultural land (fields, rangeland, agro-forests) in Simanjiro region under improved biophysical conditions**

- **X Ha of targeted communities from Simanjiro region with sustainable irrigation and drainage services**

<table>

</thead>
<tbody>
<tr>
<td><strong>Number of targeted &lt;community, household, productive organizations, MSME&gt; livelihoods productive assets (specify) protected</strong> (specify how, if necessary) to future hazards (specify if necessary)</td>
<td></td>
</tr>
</tbody>
</table>

#### Description

Change in number of productive assets (e.g. lands, livestock, infrastructures, etc.) protected and strengthened against natural or human threats.

The indicator keeps the attention to protect and strengthen livelihoods assets to improve communities/households/productive organizations resilience.

Livelihoods strengthening and protection through DRR practices:

- The creation of household or community infrastructures to protect livelihoods assets against natural or human hazards (e.g. livestock shelters, seeds banks)
- The use or adaptation of agriculture production and livestock to climate/weather conditions (drought adapted seeds, etc.)
- Initiatives or projects that reduce or eliminate livelihoods damaging production practices (climate change mitigation, natural resources over exploitation, etc.)
- The use of insurances to cope with primary production/productive assets losses (e.g. drought prone areas)
- The use of destocking techniques
- Other infrastructures (and livelihoods assets) protection and strengthening initiatives (e.g. distaste risk reduction actions, surveillance mechanisms)

#### Definitions:

- **MSME:** micro, small and medium enterprises (formal or informal)
- **DRR:** disaster risk reduction

#### Detail / Disaggregate by:

- Geography/Livelihoods zone;
- Wealth groups; Livelihoods group (e.g. pastoralist, farmers, traders);
- Period to achieve the objective;

#### Trend / Change:

- Increase

#### Data source:

Both secondary and primary data collection can be used according to context.

- Baseline/Endline (related to the specific natural resource targeted). If multiyear programme consider also a mid-term evaluation.

#### Measurement Guidance:

Depending on the type of productive infrastructure/asset service, the indicator measure:

- the number of infrastructures available;
- the change in their coverage (rate de services par population);
Livelihoods Key Program Indicators List

- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:** Depending on the livelihood infrastructure/asset (e.g. forest Ha, coastline meter-kilometer, number of water sources/water collectors, etc.)

**Data Collection methods:**
Secondary data analysis;
Livelihoods infrastructure recovery measure;
Household surveys and focus groups;
Key Informant Interviews.

**Unit of Measurement:** Depending on the Natural Resource (e.g. forest Ha, coastline meter-kilometer, number of water sources, etc.)

**Data Collection methods:**
Secondary data analysis;
Natural resource measure;
Household surveys and focus groups;
Key Informant Interviews.

**Example:**
X community water collectors for livestock in pastoralist area of Mahama protected to future hazards

At the end of the project X Ha of crop land in rural area of Kirehe district protected against floods through the use of embankments
2.8. OBJECTIVE 8. Livelihoods Rights, Policies and Regulations Improvement

“Strengthen enabling environment for improving livelihoods development. Includes all levels of advocacy interventions (community, local and national level) to allow equal rights, access and opportunities in livelihoods; as well as interventions aimed to reinforce local and national structures and processes to allow the improvement of livelihoods development and protection.”

<table>
<thead>
<tr>
<th>INDICATOR. 21</th>
<th>KRI-8-1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number/percentage of targeted population (specify group) with &lt;access to, equal opportunities in&gt; developing their livelihoods activity (specify if necessary) through program intervention</td>
<td></td>
</tr>
</tbody>
</table>

**Description**

Change in number of population getting access and equal opportunities in developing their livelihoods activity.

Interventions aimed to change (improve) population access, equal opportunities and rights to develop their livelihoods activities.

- Includes all empowerment initiatives to access equal livelihood opportunities (access to vocational trainings, access to markets/financial systems, access and land tenancy) and rights (equal wages, decision-making changes)
- Includes formalized access to basic livelihoods assets such as land, electricity, water.
- Includes actions to formalize the work permit situation of refugees (or other groups).

It's important to specify the group who it is addressed to (e.g. women, ethnic minorities)

**Detail / Disaggregate by:**

- Geography/Livelihoods zone;
- Target group: Gender, age, disabilities, chronic diseases, and any other relevant criteria, such as urban/rural, wealth group, livelihoods group (pastoralist, farmers, traders), religious, ethnic or political identities;
- Period to achieve the objective;

**Trend / Change:**

Increase

**Data source:**

Both secondary and primary data collection can be used according to context.

- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

**Unit of Measurement:**

Population. If percentage:

- Numerator: Number population getting access and equal opportunities to develop their livelihood activity.
- Denominator: Total number of targeted population

**Measurement Guidance:**

Improvement of access and equal opportunities to develop livelihoods activities, can be measured (depending on the program and objectives) through:

- Formal ownership and access records (land tenure, MSME ownership, credit access, etc.)
- Household surveys with intra-household (checking who in the household has (a) access to/ use of, (b) control of, each asset)
- Local/regional employment records
- Training records
- Legislation, policies, strategies changes that benefit an overall group (e.g. displaced population, minority, etc.)
### Livelihoods Key Program Indicators List

**Data Collection methods:**
- Secondary data analysis;
- Household surveys and focus groups;
- Key Informant Interviews;
- Formal ownership records;
- Productive organizations, MSMEs’ survey and records;
- Trainings records/reports
- Employment records.

**Examples:**
- X% of targeted women in rural area of Kayenzi with secure land ownership/tenancy through program intervention. At the end of the program X% of targeted land users in rural area of Kayenzi (from those Y% are women) with legally and formally secured use and disposal rights.
- X% of targeted women refugees in Gambella district with income equal or higher than national standard minimum wage.
- X% of targeted refugees (from those Y% are women) with formalized work permit through program intervention.

<table>
<thead>
<tr>
<th>INDICATOR. 22</th>
<th>KRI-8-2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of &lt;policies, laws, contingency plans, strategies, structures&gt; adopted or created to improve the livelihoods development and protection environment (specify if necessary) for (specify target group)</td>
<td></td>
</tr>
</tbody>
</table>

**Description**

Change in number of policies, laws, contingency plans, strategies, structures adopted or created to improve the livelihoods development and protection environment.

All advocacy and strengthening interventions to enable an enhanced environment to develop vulnerable people/groups' livelihoods:

- Includes the adoption of laws/policies/regulations to allow the access to basic livelihoods assets
- Includes the adoption of laws/policies/regulations to allow equal livelihoods opportunities and rights
- Includes national or local regulations/strategies or structures to improve market development, access to credit/financial systems
- Includes national or local regulations/strategies or structures to protect natural resources and livelihoods (e.g. early warning systems, natural resources regulations)

It’s important to specify the group who it is addressed to if necessary (e.g. women, ethnic minorities, traders).

**Detail / Disaggregate by:**
- Geography/Livelihoods zone;
- Target group: Gender, age, disabilities, chronic diseases, and any other relevant criteria, such as urban/rural, wealth group, livelihoods group (pastoralist, farmers, traders), religious, ethnic or political identities;
- Period to achieve the objective;

**Trend / Change:**
- Increase
### Data source:
Both secondary and primary data collection can be used according to context.
- Baseline/Endline. If multiyear programme consider also a mid-term evaluation.
- Secondary data. Reliable/relevant sources from other actors, clusters or government (e.g. assessment information, reference to a normal situation).

### Unit of Measurement:
Policies, laws, contingency plans, strategies, structures, etc.

### Data Collection methods:
Secondary data analysis;
Government reports/records/plans of action (regional, local);
Formal ownership records;
Target group surveys / focus groups;
Key Informant Interviews.

### Measurement Guidance:
Measure the number of policies/strategies, etc., adopted or created and their application.

Depending on the type of policy/regulation it would be necessary to link it with the development or improvement of livelihoods.

Measure advocacy activities: number of events, documents published and signatories as often this can be done as a lobby to generate a change in policy, law regulations (which sometimes might take a long time).

### Examples:
- **X national employment strategies accepted and validated by government to improve the livelihoods development of minorities groups**

- **X commerce laws and regulations simplified and implemented to improve and develop small-traders activity**

- **X improvements in laws and regulations to improve the registration and operation of micro or small enterprises**

- **X Surveillance, Early Warning Systems methodologies accepted and validated by government and external stakeholders to protect lives and livelihoods**
### 3. DEFINITIONS AND ACRONYMS

<table>
<thead>
<tr>
<th>Concept</th>
<th>Definition</th>
</tr>
</thead>
</table>
| **Survival Threshold** | The Survival Threshold represents the total income required to cover:  
  a. 100% of minimum food energy needs (2100 kcals per person), plus  
  b. The costs associated with food preparation and consumption (i.e. salt, soap, kerosene and/or firewood for cooking and basic lighting), plus  
  c. Any expenditure on water for human consumption.                                                                                                                                                                                                                                                                 |
| **Livelihoods Protection Threshold** | The Livelihoods Protection Threshold represents the total income required to sustain local livelihoods.  
  a. Ensure basic survival (see column to left), plus  
  b. Maintain access to basic services (e.g. routine medical and schooling expenses), plus  
  c. Sustain livelihoods in the medium to longer term (e.g. regular purchases of seeds, fertilizer, veterinary drugs, etc.), plus  
  d. Achieve a minimum locally acceptable standard of living (e.g. purchase of basic clothing, coffee/tea, etc.)                                                                                                                                                                                                 |
| **MSME**               | Micro, small and medium enterprises                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| **IGA**                | Income Generation Activity                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| **DRR**                | Disaster Risk Reduction                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| **NRM**                | NRM refers to the sustainable utilization of major natural resources, such as land, water, air, minerals, forests, fisheries, and wild flora and fauna. Together, these resources provide the ecosystem services that underpin human life.                                                                                                                                                                                                                     |
| **CCA**                | Climate Change Adaptation.  
  Climate Change Adaptation refers to the adjustment in natural or human systems in response to actual or expected climatic stimuli or their effects, which moderates harm or exploits beneficial opportunities.                                                                                                                                                                                                                   |
| **HEA**                | Household Economy Approach                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| **HES**                | Household Economic Security                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

4. ACKNOWLEDGES

The development of the Livelihoods Program Indicators list (presented in this document) has counted with the invaluable support and contribution of a heterogeneous group of specialized practitioners in Livelihoods or Monitoring & Evaluation, coming from different Implementing NGOs, UN Agencies or independent consultants.
